

Will artificial intelligence destroy the jobs of millions of white collar workers or will it liberate them from menial tasks and transform their productivity? The Financial Times and Swire Properties invite you to a discussion on AI and its role in transforming the future of the workplace at The Refinery.

With the sudden arrival of ChatGPT earlier this year, AI is emerging as one of the biggest new technologies in years. But does the current technology really deserve the name 'artificial intelligence'? How does it work and which jobs will it affect the most?

The talk will be hosted by the Financial Time's Asia Editor Robin Harding, China Technology Correspondent Qianer Liu, and Blu Ltd Managing Director Kevin Pereira.

Robin Harding Asia Editor, Financial Times

Robin oversees coverage across Asia, including China, India, Singapore, and Japan. He was Tokyo bureau chief and US economics editor prior to becoming Asia editor in 2021.

Qianer Liu China Technology Reporter, Financial Times

Based in Hong Kong, Qianer covers China technology for the FT. She was previously South China researcher at the China Bureau and had worked at Alibaba-owned Lazada before rejoining the FT in 2022.

Kevin Pereira Managing Director, Blu Artificial Intelligence

Kevin manages Blu Artificial Intelligence, a consulting firm specialising in artificial intelligence. He is also a part-time lecturer for courses on Al and big data at the University of Hong Kong and the Hong Kong University of Science and Technology.
